PROFESSIONAL SUMMARY

Detail-oriented Cybersecurity Engineering student specializing in hands-on defensive security operations, infrastructure hardening, and practical scripting. Experienced in building and monitoring simulated environments using SIEM platforms, analyzing log data, and writing automation scripts to speed up threat evaluation. Pragmatic and technically agile engineer seeking an entry-level SOC Analyst or Blue Team role to identify, validate, and mitigate security threats in real-time.

TECHNICAL SKILLS

Threat Detection & SIEM: Log Monitoring & Triage, Splunk, Wazuh (XDR), ELK Stack, Microsoft Sentinel, Security Onion

Network Security & Monitoring: Wireshark, Zeek, Suricata, Snort, Firewalls, VPN, TCP/IP, Subnetting

Vulnerability & Hardening: Nessus, Burp Suite, Nmap, System Hardening, Active Directory, GPO, MFA, SSO

Frameworks & Methodology: MITRE ATT&CK®, NIST CSF, ISO 27001, OWASP Top 10, Playbooks, Incident Response Plan (IRP)

Automation & Infrastructure: Python, Bash, PowerShell, Linux (Ubuntu, Kali), Windows Server, Docker, Git, VMware, AWS, Azure

TECHNICAL PROJECTS

Meiyan — Threat Intelligence & Malware Analysis CLI

Python, VirusTotal API, AbuseIPDB, Security Automation

- Built a parallelized CLI engine that automatically queries security APIs to aggregate threat intelligence on indicators of compromise.
- Implemented a custom scoring logic to weigh multiple threat feeds, helping accelerate the analyst lookup process.
- **Impact:** Reduced manual asset and threat triage times by replacing sequential manual lookups with concurrent data collection.

CyberSecurity Lab Setup — Defensive Architecture

Home Lab Defensive Architecture, Network Security, Infrastructure Hardening

- Designed and deployed a private home lab environment using segmented networks to test common network threat and attack vectors.
- Integrated Wireshark, Security Onion, Nessus, and Splunk to monitor lab traffic, centralize log collection, and manage system exposure.
- Practiced alert verification workflows and analyzed packet captures from simulated network scans and account brute-force exercises.

Mithran Voice AI Agent

Python, LiveKit Agents, OpenAI Realtime API, WebRTC

- Developed a functional, low-latency voice assistant agent using Python with LiveKit and the OpenAI Realtime API.
- Gained hands-on experience handling asynchronous API interactions, establishing logic workflows relevant to creating automated security tool integrations and alert playbooks.

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Foundational risk management, SIEM triage, and threat analysis

Cisco — Junior Cybersecurity Analyst Career Path — Security operations, asset security, and network monitoring

APISEC — API Security Fundamentals — Advanced OWASP API Top 10 mitigation and breach analysis

Udemy — Learn Ethical Hacking from Scratch (Z Security) — Vulnerability assessment and penetration testing

EDUCATION

B.E. Computer Science & Cybersecurity Engineering

2022 — 2026

K.L.N. College of Engineering, Sivagangai, Tamil Nadu, India

CGPA: 7.60

Relevant Coursework: Network Security, Operating Systems, Cloud Computing, Database Systems, Ethical Hacking, Software Development.

PROFESSIONAL SKILLS

Communication & Collaboration: Relaying technical details clearly to team members.

Problem Solving: Methodical troubleshooting during alert triage and defensive setups.

Adaptability: Eager to learn new tools, network environments, and technical defensive workflows.
